Lesson:4

National Domain (المجال الوطني)

The national domain refers to the territory and resources that are under the control and ownership of the State. It includes the public and private domains of the State, wilaya (administrative division), and commune. The law governs the management and administration of the national domain.

Organization of Foreign Trade (تنظيم التجارة الخارجية)

The organization of foreign trade is the responsibility of the State. It involves the regulations, policies, and procedures implemented to manage and control the import and export activities with other countries. The law establishes the conditions for the exercise and supervision of foreign trade.

Expropriation (المصادرة)

Expropriation is the legal process through which the government acquires private property for public use or benefit. It can only occur within the framework established by law. In such cases, the affected property owners are entitled to fair and equitable compensation for the loss of their property.

Enrichment and Private Interests (الإثراء والمصالح الخاصة)

Functions and mandates in the service of State institutions should not be a means of personal enrichment or serving private interests. Any individual appointed to a higher State function, elected to a local assembly, or appointed to a national assembly or institution must declare their assets at the beginning and end of their term. This provision is governed by law.
